"Functional expression of zeaxanthin glucosyltransferase from Erwinia herbicola and a proposed uridine diphosphate binding site.";
Proc. Nacl. Acad. Sci. U.S.A. 89:9321-9325(1992).
-i. FUNCTION: CATALYZES THE GLYCOSYLATION REACTION WHICH CONVERTS
-ZEAXANTHIN TO ZERNANTHIN PERA-DIGLUCOSIDE.
-i. PATHWAY: Carclemoid biosynthesis.
-i. PATHWAY: Carclemoid biosynthesis.
                                                                                                                                                                                                                                   IGKRASRFTTSHALARQIRSLLTWIDYPQRMTKIQAALRLAGGTPAADIVEQAMRTCQP

Toloning and characterization of rabbit liver UDP-

Tylouronosyltransferase cDNAs. Developmental and inducible expression of 4-hydroxybiphenyl UGT2B13.";

J. Biol. Chem. 268:1526-15266(1993).

- FUNCTION: UDPGT is of major importance in the conjugation and subsequent elimination of potentially toxic xenobiotics and endogenous compounds.

- CAPALYTIC ACTIVITY: UDP-glucuronate + acceptor = UDP + acceptor beta-D-glucuronoside.

- CAPALYTIC ACTIVITY: UDP-glucuronate + acceptor = UDP + acceptor

- SIMILARITY: Belongs to the UDP-glycosyltransferase family.

- SIMILARITY: Belongs to the UDP-1.

                  Gene 108:55-62(1991).
-!- FUNCTION: SPECIFICALLY INACTIVATES MACROLIDES VIA 2'-0-GLYCOSYLATION USING UDP-GLUCOSE.
-!- SIMILARITY: Belongs to the UDP-glycosyltransferase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Transferase, Glycosyltransferase, Antibiotic resistance.

Comment=A number of isoforms are produced. The different
isozymes have adifferent N-terminal domain and a common
C-terminal domain of 245 residues;
                                                                                                                                                                                     Isoid=064550-1; Sequence-Displayed;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A -> D (IN REF. 2).

UDP-glucuronosyltransferase 2B8 precursor, microsomal (EC 2.4.1.17)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -i- CATALYTIC ACTIVITY: UDP-glucuronate + acceptor = UDP + acceptor beta-D-glucuronoside.
-i- SUBCELLULAR LOCATION: Microsomal.
-i- SIMILARITY: Belongs to the UDP-glycosyltransferase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                H4IIEC3 hepatoma cells.";
Submitted (MAY-1995) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: UDPGT is of major importance in the conjugation and subsequent elimination of potentially toxic xenobiotics and endogenous compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cohen H., Trus M., Benvenisty N., Reshef L.; A novel member of the UDPGT family is abundantly expressed in

"Cloning and characterization of a novel human olfactory UDP-
glucuronosyltransferase.";
Biochem. J. 340:837-843(1999).
-: FUNCTION: UDPGT is of major importance in the conjugation and
subsequent elimination of potentially toxic xenobictics and
endogenous compounds. This isoform is active on odorants and
seems to be involved in olfaction; it could help clear libophilic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             10-OCT-2003 (Rel. 42, Created)

CANALYTIC ACTIVITY: UDP-glucuronate + acceptor = UDP + acceptor
beta-D-glucuronoside.
SIMILARITY: Belongs to the UDP-glycosyltransferase family.
01-NOV-1997 (Rel. 35, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Submitted (AUG-2000) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: UDPGT is of major importance in the conjugation and subsequent elimination of potentially toxic xenobiotics and endogenous compounds. This isoform has specificity for phenols.

-!- CATALYTIC ACTIVITY: UDP-glucuronate + acceptor = UDP + acceptor beta-D-glucuronaide.

-!- SUBCELLULAR LOCATION: Microsomal.

-!- ALTERNATIVE PRODUCTS:

EVENT.=ALTERNATIVE PRODUCTS:

EVENT.=Alternative splicing; Named isoforms=1;

Comment=A number of isoforms may be produced. Isoforms have a different W-terminal domain and a common C-terminal domain of

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                              2231
